
# Instructional Science

**An International Journal of Learning and Cognition**

**CONTENTS of Volume 23 1995**

**Volume 23 Nos. 1–3**

*Special Issue*
**AI Tools and the Classroom: Theory into Practice**
**(Papers from the Seventh International PEG Conference)**
*Guest Editor:* Tom Conlon

Conlon, T.: AI Tools and the classroom: Theory into practice 1–5

Bottino, R.M. & Chiappini, G.: ARI-LAB: Models, issues and strategies in the design of a multiple-tools problem solving environment 7–23

Nguyen-Xuan, A., Nicaud, J.-F. & Gelis, J.-M.: An experiment in learning algebra with an intelligent learning environment 25–45

Wang, Y. & Garigliano, R.: Empirical studies and intelligent language tutoring 47–64

Bull, S., Pain, H. & Brna, P.: Mr. Collins: A collaborativeiy constructed, inspectable student model for intelligent computer assisted language learning 65–87

Baranauskas, M.C.C.: Observational studies about novices interacting in a Prolog environment based on tools 89–109

Conlon, T. & Bowman, N.: Expert systems, shells, and schools: Present practice, future prospects 111–131

Chee, Y.S.: Cognitive apprenticeship and its application to the teaching of Smalltalk in a multimedia interactive learning environment 133–161

Puntambekar, S.: Helping student learn 'how to learn' from texts: Towards an ITS for developing metacognition 163–182

Chen, M.: A methodology for characterizing computer-based learning environments 183–220

**Volume 23 No. 4**

De Bruin, H.F.M.: Cognitive apprenticeship in a CAL-environment for functionally illiterate adults 221–241

Garnier, C. & Bednarz, N.: Changes in the representation of dynamism in fifth grade children 243–267

Hensgens, J., Van Rosmalen, P. & Van der Baaren, J.: Authoring for simulation-based learning 269–296

**Volume 23 Nos. 5–6**

*Special Issue*
**Applications of Computer Technology in Instruction and Training**

*Guest Editors:* Robert J. Seidel and Ok-Choon Park

**Introduction**

Seidel, R.J. & Park, O.-C.: Applications of computer technology in instruction and training: A research framework and examples 297–302

**Articles**

Park, O.-C. & Gittelman, S.S.: Dynamic characteristics of mental models and dynamic visual displays 303–320

Perez, R.S., Johnson, J.F. & Emery, C.D.: Instructional design expertise: A cognitive model of design 321–349

Holland, V.M. & Kaplan, J.D.: Natural language processing techniques in computer-assisted language learning: Status and instructional issues 351–380

Wisher, R.A., Sabol, M.A. & Kern, R.P.: Modeling acquisition of an advanced skill: The case of Morse code copying 381–403

Psotka, J.: Immersive training systems: Virtual reality and education and training 405–431

Everson, H.T.: Modeling the student in intelligent tutoring systems: The promise of a new psychometrics 433–452

**Book Reviews**

Barron, A. & Orwig, G., *Multimedia Technologies for Training: An Introduction* (SHARON K. GARCIA) 453–455
Towne, D.M., *Learning and Instruction in Simulation Environments* (BARBARA WASSON) 455–459
Johnson, D.C. & Samways, B. (Eds.), Proceedings of the IFIPTC3/WG3.1./WG3.5 Open Conference on *Informatics and Changes in Learning* (CRAIG R. HALL) 459–464
